

HIGH COMPLEXITY: all transaction ending after more than one person/ company has taken part in the process of service or product.  
POTENTIALLY COMPLEX MONITORING/CONDITIONS AND HIGH NUMBER OF MACHINE READABLE VARIABLES

Most complex relationships ending in a transaction: primarily BB of products or services. Potentially Relatively low number of transaction at a high value. Examples are shipping companies where many are involved in the delivery of products or delivery of products bought I internet.

MEDIUM COMPLEXITY flow: all transaction ending after service or product has been delivered to one costumer. Buying services or products online.

Most common form of transaction: primarily Business to Costumer or Peer to Peer Services or products. Potentially relative low value but many straightforward transactions where there are refunds and guarantees possible

LOW COMPLEXITY flow: no machine readable variables established Example money transfer, buying products in shops, certifying photo, or document

Most simple form of transaction :Money transaction to another person without any condition established. The action is primarily manually done
