

CLEAR CONTAINER MANAGEMENT

Supply chains with increasing internationalization and growing complexity, place considerable demands on the management of shipping containers. Whether the container processes are simple or complex – **in the inet container management solution, all of the relevant container movements are visible.**

The transparency gained in this way helps you to **plan, control, settle** and **analyze** your **container cycles** on an optimum basis. You gain a comprehensive and detailed picture of your container inventories and container costs. This enables inventories to be reduced and additional optimization measures to be identified. You benefit therefore from the real time web-based and integrated container management from inet!

At a glance

- all container movements in a single system
- continuity and scalability from planning to KPI reporting
- traceability of all containers in the network (global visibility)
- consistent and valid data for negotiations, reports and analyses
- audit-compliant container management
- easy access to all container information (web-based, integrated and in real-time)
- usage-based container fee settlement
- container management with and without serial numbers
